DELIVERING AGILITY AND SPEED TO INTEGRATION

Industrial Stormwater Pipe Manufacturer Modernizes Integration Platform

CUSTOMER PROFILE

A leading manufacturer of high-performance thermoplastic drainage products and services

4,700+
employees worldwide

50+
years of innovation

~60
manufacturing plants

30+
distribution centers

THE CHALLENGE

Data integrations are at the center of this customer's quickly expanding processes. The company required agility and speed to meet its business demands. Its critical capabilities were not being met by its legacy on-premises integration platform resulting in the adoption of the MuleSoft® Anypoint Platform™ and a shift of the integration layer to the cloud.

Subsequently, the customer required a managed file transfer (MFT) solution that was both cloud-native and easily integrated with MuleSoft to manage the business-critical data file transfers with its external partners.
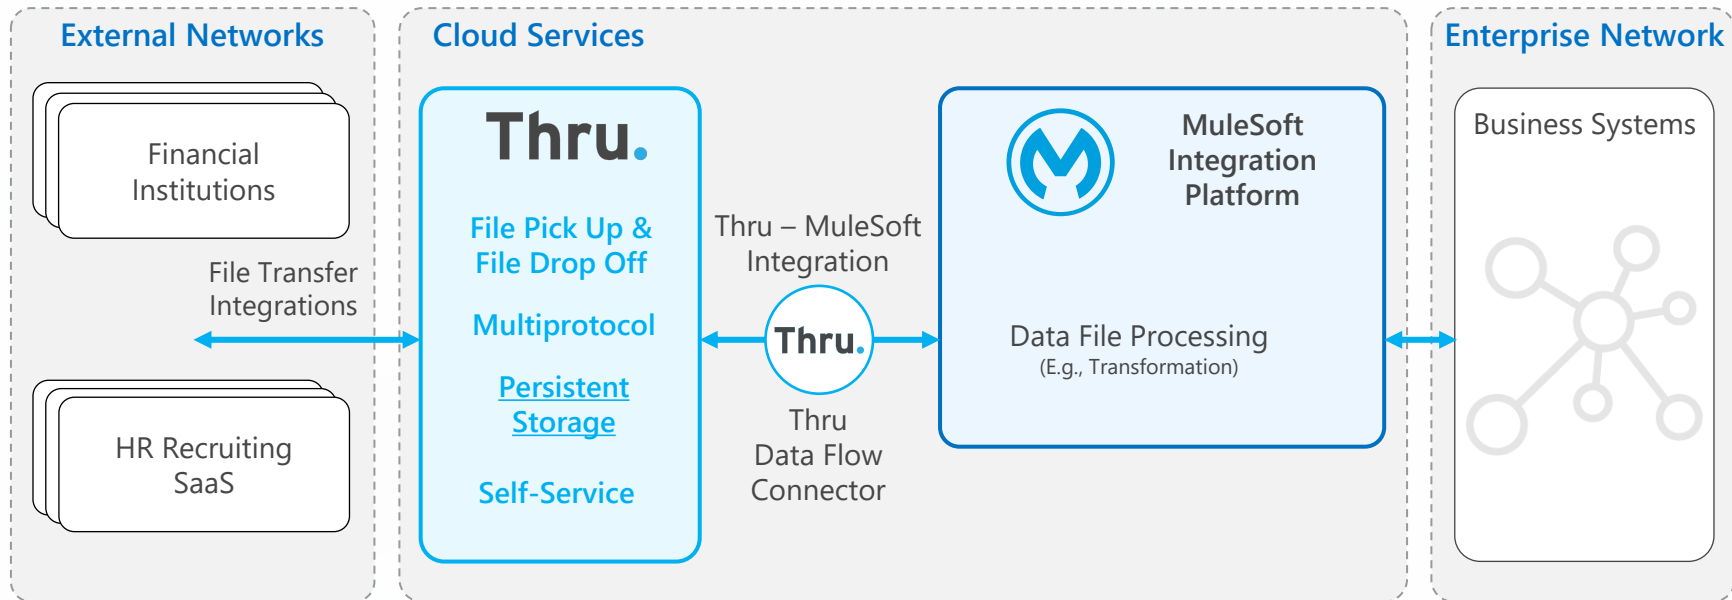

Critical capabilities include

- No code integration with MuleSoft

- Easy migration of existing integrations

- Future-proof MFT platform

THE SOLUTION

The company selected Thru as the MFT solution because of its cloud-native architecture and its no-code MFT Connector for MuleSoft to easily set up file transfer integrations.

Enterprise Network

Business Systems

USE CASE 1: Integration with Financial Institutions

The client exchanges financial data such as outbound payments and inbound reports with multiple financial institutions. The Thru® MFT Connector streams data in and out of Mule flows where data is processed.

USE CASE 2: Integration with HR SaaS

As candidates are hired through a cloud recruiting service, numerous XML files are generated. Using the MFT connector, Thru picks up the XML files from the HR SaaS and drops the files to MuleSoft for processing.

THE RESULTS

IMPROVED
file delivery reliability
from 90% to **100%**

40% **SAVINGS**
in total operational costs
over 3 years

REDUCED
resources required to
manage global MFT integrations **10 to 2**

5x **DECREASED**
partner onboarding times
from weeks to minutes

ABOUT THRU

Thru is an API-centric, cloud MFT platform that enhances integration platforms for a comprehensive file-based data exchange solution. Since 2002, we have offered market first technologies designed to tackle the most demanding and complex file transfer challenges. Our customers include Fortune Global 500 manufacturing, retail, logistics, transportation, financial services, consumer goods and energy companies with diverse and unique business processes requiring enterprise-grade, scalable secure file transfer technology.

OUR APPROACH

Discovery > **Design** > **Alignment** > **Planning** > **Testing** > **Deploy**

Discovery	Design	Alignment	Planning	Testing	Deploy
Understand the current state and future vision	Design the integration and data flows of future state	Discuss and agree on solution	Plan migration from existing system to Thru	Test integrations, connections and transfers	Go Live!
