

enables **UNLIMITED** file sharing

The Thru for IBM Notes add-in allows companies to expand their email messaging environment and provides endpoint message protection without file size limitations. The add-in allows simplified messaging with partners, customers and suppliers without additional training time or expense. It seamlessly adds expiration and password-protection functionality enabling users to control access to messages and files in motion and revoke access on-demand.

Integrated with the Notes environment and Domino server, users easily send large attachments as normal and transactions are always protected with Thru's enterprise-grade encryption and antivirus scanning. No PGP, PKI or encryption key exchange is necessary before messages are sent.

Send Emails Securely

Standard IBM Notes email wasn't designed to handle large file sizes and meet compliance policies. Add enhanced security and performance to your Domino server.

- Streamline your policy enforcement by setting file transfer rules
- Replace unsecure FTP servers by incorporating file transfers into existing email processes
- Keep business data private with encryption of all file transfers

Streamline Email Messaging

Securely send, track and manage any size file or folder directly from IBM Notes:

- Replace standard file attachments by sending files via secure links
- Offload large file transfers to Thru to increase server performance and server capacity
- Distribute, collect, assess and track files without changing email workflow

Ensure Privacy

Prevent unauthorized access to data with built-in security features.

- Control access to messages and revoke access on demand with expiration control and password authentication
- Regulate access controls either at the individual or IT level
- Report all file activities based on IP address, device and application

System Requirements

IBM Notes 8.5.3 or above

Microsoft .NET Framework 3.5 or above

Operating Systems

- Windows 7
- Windows 8
- Windows 8.1

Windows Administrator Access

Plugin Installation

- Installed only on the client-side
- Nothing is installed on the server

Hard Drive Space

- 20 MB or greater
